

Turnover of trade

2019, June

Turnover of trade grew by 2.9 per cent in June

According to Statistics Finland, the working day adjusted turnover of total trade grew by 2.9 per cent in June compared to June 2018. The working day adjusted sales volume, from which the impact of price changes has been eliminated, increased by 3.1 per cent over the same period. The development of both turnover and sales volume was positive in all industries of trade.

Annual change in working day adjusted turnover and sales volume in total trade (G), %

Source: Statistics Finland

In motor vehicle trade, the working day adjusted turnover increased by 2.8 per cent in June and the sales volume also by 2.9 per cent from one year ago. The working day adjusted turnover of wholesale trade grew, in turn, by 1.8 per cent and the sales volume by 2.2 per cent. In June, turnover and sales volume grew most in retail trade, both by 4.7 per cent. Retail trade was boosted by daily consumer goods, department store and specialised store trade. Among the industries, growth was fastest in department store trade, where working day adjusted turnover was 7.5 per cent higher and sales volume 6.7 per cent higher than one year earlier.

In January to June, the working day adjusted turnover of total trade increased by 1.5 per cent and the sales volume by 0.4 per cent from the corresponding period of 2018.

Trend of turnover and sales volume in total trade

Source: Statistics Finland

The calculation of indices of turnover of trade is based on the Tax Administration’s data on self-assessed taxes, which are supplemented with Statistics Finland’s sales inquiry. The volume index of sales is calculated by removing the effect of price changes from the value index series.

The factors caused by the variation in the number of weekdays are taken into account in adjustment for working days. This means taking into consideration the lengths of months, different weekdays and holidays. In addition, seasonal variation is eliminated from seasonally adjusted series, on account of which it makes sense to compare observations of two successive months as well.

The data for the latest month are preliminary and they may become significantly revised particularly on more detailed industry levels in coming months.

	2016	-0.2	0.7
	2017	-0.2	0.6
Daily consumer goods trade (4711, 472)	2015	-0.2	0.4
	2016	-0.3	0.5
	2017	-0.1	0.5
Department store trade (4719)	2015	-0.3	0.4
	2016	-0.4	0.4
	2017	0.1	0.9

1) In 2015, the average was calculated from data revised between the first and seventh release months in the statistical reference year. The average for 2016 and 2017 was calculated upon completion of the data for the first and last release months in the statistical reference year, when the official structural business and financial statement statistics are also published. The data were calculated from annual changes in the original index series.

2) In 2015, the average was calculated from the absolute values of differences between the first and seventh release months. The average for 2016 and 2017 was calculated from the absolute values of differences between the first and last release months in the statistical reference year, when the official structural business and financial statement statistics are also published. The data were calculated from annual changes in the original index series.
