The calculation of indices of turnover of construction is based on the Tax Administration’s data on self-assessed taxes, which are supplemented with Statistics Finland’s sales inquiry. The monthly turnover of construction enterprises can have even large variations due to invoicing practices. The final invoice for major projects may be recorded in the sales of one month, even if the project had required the work of several months or years.

The factors caused by the variation in the number of weekdays are taken into account in adjustment for working days. This means taking into consideration the lengths of months, different weekdays and holidays. In addition, seasonal variation is eliminated from seasonally adjusted series, on account of which it makes sense to compare observations of two successive months as well.

The data for the latest month are preliminary and they may become significantly revised particularly on more detailed industry levels in coming months.
