

# New orders in manufacturing

2010, September

## New orders in manufacturing grew by close on one-third year-on-year in September

According to Statistics Finland, the value of new orders in manufacturing was 31.9 per cent higher in September 2010 than twelve months earlier. In the January to September period, new orders in manufacturing increased by 22.6 per cent year-on-year.

**Change in new orders in manufacturing from corresponding month of the previous year (original series), % (TOL 2008)**

The growth of new orders in manufacturing continued strong in September. As in the preceding months, the value of new orders rose in all the examined main industries. Growth was clearly strongest in the metal industry, where the value of orders was as much as 46.3 per cent higher than in the previous year. Orders grew by 14.0 per cent in the textile industry and in the manufacture of paper, and paper and board products and by 7.3 per cent in the chemical industry. Despite the strong growth, in the most important main activity, the metal industry, the value of new orders was nevertheless fairly low, so the growth is partly explained by the weak situation in the respective period of the comparison year.

These statistics should be examined bearing in mind that they typically show strong monthly fluctuations because even new orders of high value are not examined over extended time periods but for the statistical reference month only.

**Change in new orders in manufacturing 09/2009–09/2010 (TOL 2008)**

The index of new orders in manufacturing describes development in the value of new orders received by enterprises for commodities and services that are meant to be produced by establishments located in Finland. These statistics are based on non-probability sampling, in which the basic observation unit is an enterprise or a kind-of-activity unit. The sample comprises monthly approximately 400 to 430 enterprises or their kind-of-activity units. Index point figures and annual change percentages are published monthly for five industry categories. The time series start from January 2005 and their base year is 2005 (2005=100). A detailed description of the statistics and the calculation method are included in the quality description on the home page of the statistics.

## Appendix tables

**Appendix table 1. Three-month moving change, cumulative change and change in the latest month, year-on-year, % (TOL 2008)**

	Year-on-year change by three-month period, % <sup>1)</sup>				Cumulative year-on-year change, % <sup>1)</sup>	Year-on-year change in the latest month, % <sup>1)</sup>
	10–12/2009	01–03/2010	04–06/2010	07–09/2010		
Manufacturing industry (13-14, 17, 20-21, 24-30)	-4,8	9,5	32,2	26,3	22,6	31,9
Manufacture of textiles and textile products (13-14)	-6,1	8,5	23,7	14,5	15,3	14,0
Manufacture of paper and paper products (17)	-4,0	17,6	36,2	20,2	24,8	14,0
Chemical industry (20-21)	-2,3	8,9	18,7	14,4	13,8	7,3
Metal industry (24-30)	-5,5	6,5	33,4	32,4	23,8	46,3

1) Year-on-year change compares the value for an examined time period to the value for the corresponding time period twelve months back.
